

## Subject Index

- Acoustic streaming, visualization of, 371  
Acoustic wave cryocooler for -60°C, 309  
ADR (*see* Magnetic refrigerators)  
AIM (AEG Infrarot-Module), 139  
Air Force Research Lab (AFRL):  
  Astrium 10K Stirling cooler, 55  
  Ball 10K hybrid Stirling/J-T cooler, 505  
  char. and endurance update, 17  
  cooler contamination lessons, 649  
  fail-safe experiment stand, 699  
  failure analysis of Creare SSRB, 673  
  failure analysis of TRW 3503, 673  
  program requirements overview, 1  
  Raytheon 35K 1.2W PSC cooler, 35  
  Raytheon 60K 2W PSC cooler, 45  
  reliability initiatives, 27  
  technology for cryogen storage, 749  
  vibration reduction in compressors, 175  
Aisin Seiki 4K pulse tube, 243  
American Superconductor Co., 235  
Ames Research Center (NASA):  
  regenerator materials for 20K PT, 475  
  zero-boil-off cryogen storage, 809  
Ames Laboratory (Iowa State Univ.):  
  erbium regenerator materials, 433  
  properties of polycrystalline **Gd<sub>2</sub>In**, 457  
  regenerator materials for 20K PT, 475  
  rare earth powder manufacturing, 449  
Anti-stokes fluorescence:  
  in Los Alamos optical cooler, 631  
  using molecular dyes, 621  
  in Ball optical cooler, 613  
APD Cryogenics:  
  J-T cryostats for cryosurgery, 783  
  small throttle-cycles with mixed gases, 513  
Applications (*see* Integration with cryocoolers)  
Arizona State University, 689  
Astrium cryocoolers (*formerly* BAe and MMS):  
  10 K 2-stage Stirling cooler, 55  
  50-80K MOPITT cooler performance, 759  
Atlas Scientific, 475  
BAE Systems (*formerly* BEI):  
  cooler contamination study, 659  
  life test results, 665  
Ball Aerospace cryocoolers:  
  cooler contamination lessons, 649  
  10K hybrid Stirling/J-T cooler, 505  
  12K Stirling for 6K Hybrid J-T, 63  
  6K J-T for NGST Instruments, 775  
  HIRDLS Stirling integration, 769  
  optical cryocooler research, 613  
Bearings:  
  flexures in tactical coolers, 103, 111, 155  
  flexures in long-life compressor, 169  
BEI (*see* BAE Systems)  
Brayton cycle cryocoolers (*see* Turbo-Brayton cryocoolers)  
British Aerospace (BAe) cryocoolers (*see* Astrium cryocoolers)  
California Institute of Technology, 577  
  (*see also* Jet Propulsion Laboratory)  
CEA/DRFMC (France):  
  sub-Kelvin coolers for space, 561, 567  
  GM-type pulse tube refrigerators, 229  
Chinese Academy of Sciences, Cryogenics Lab:  
  4K GM/PT hybrid refrigerator, 265  
  mixed-gas auto-cascade J-Ts, 523  
  multi-bypass PT refrigerator, 337  
Chiyoda Corp., 363  
Compressors:  
  Oxford/Hymatic linear for PT, 169  
  flexure bearings in, 103, 111  
  vibration reduction in, 175  
Conductance, measurements of:  
  beds of metal spheres, 419  
  silver filled epoxy junctions, 689  
Contamination:  
  space cooler contamination lessons, 649  
  temp. dependence of outgassing, 659  
COM DEV, 759  
Creare Cryocoolers:  
  4-35K Brayton cooler developments, 481  
  failure analysis of Creare SSRB, 673  
  flexible Brayton cryocooler model, 499  
  life and reliability of Brayton coolers, 489  
Cryomech, Inc:  
  4K pulse tube, 205  
  20 to 40K GM cryorefrigerators, 387  
CSA Engineering, 739  
Daikin Industries:  
  2.4K two-stage PT using **GdAlO<sub>3</sub>**, 213  
  80K-1W pulse tube for HTS filters, 119

- regenerator material for sub-4K, 465
- Database of cryo material properties, 681
- DC flow, effect on PT efficiency, 371
- DRS tactical Stirling coolers:
  - 1.75W-77K performance characterization, 155
  - gamma-ray pulse tube cooler, 155
  - with flexure springs, 103, 155
- Dynacs Engineering Co., 17, 45, 673, 699
- Ecole Normale Supérieure, 317
- Eindhoven Univ. of Technology, 309
- Electric field emissions (*see* EMI/EMC measurements)
- Electromagnetic interference (*see* EMI/EMC measurements)
- Electronics:
  - cooler drive and control, 145
- EMI/EMC measurements:
  - for SQUID-based heart monitor, 793
- Erbium regenerator materials (*see* Regenerators)
- European Space (ESA-ESRTC) activities, 567
- Exergy analysis, 69
- Experiment stand, fail-safe, 699
- Flexure spring bearings (*see* Bearings)
- Friedrich-Schiller Univ., Jena, 327
- Gas-gap heat switches (*see* Heat switches)
- Georgia Tech Research Institute, 27
- Gifford-McMahon Cryocoolers:
  - 4K GM/PT hybrid refrigerator, 265
  - Cryomech 20 to 40K single-stage, 387
  - optimum intermediate temperatures for, 401
  - Sb regenerator compounds for 4K, 443
  - Sumitomo, operation below 2K, 381
  - with external cold-end flow loop, 393
- Gimbal thermal transport system, 707
- Glenn Research Center (NASA), 809
- Goddard Space Flight Center (NASA):
  - cooler contamination lessons learned, 649
  - continuous magnetic refrigerator, 587
  - Create 4-35K Brayton developments 481
  - flexible Brayton cryocooler model, 499
  - life and reliability of Brayton coolers, 489
- Heat switches:
  - JPL design and reliability of, 637
  - Swales development and testing of, 729
- Heat pipes:
  - for waste heat removal, 707
- Heat conduction (*see* Conductance measurements)
- Heat transfer in pulse tubes, 345
- High temperature superconductor applications (*see* HTS applications)
- HIRDLS cryocooler integration, 769
- Hong Ik Univ., 345
- HTS applications:
  - coolers for, 79, 95, 87, 119, 139, 235, 291
  - fetal heart monitor using SQUIDS, 793
  - RF filters for telecommunications, 119, 125
- Hybrid cryocoolers:
  - 4K GM/PT hybrid refrigerator, 265
  - Ball 6K hybrid J-T/Stirling, 63
  - Ball 10K hybrid J-T/Stirling cooler, 505
  - Raytheon Stirling with PT expander, 259
  - thermoacoustic driven PT, 301
- Hymatic Engineering Co., 169
- IGC-APD Cryogenics (*see* APD Cryogenics)
- IGC-Polycold Systems, 513
- Imperial College, London, 621
- Integration of cryocoolers with:
  - bolometers, 577
  - cryosurgical applications, 783
  - external cold-end fluid loop, 393
  - fail-safe experiment stand, 699
  - flight electronics, 145
  - gas liquefiers, 79, 199, 749, 803, 809
  - gimbal thermal transport system, 707
  - heart monitor, 793
  - heat pipes (*see* Heat pipes)
  - HTS applications (*see* HTS applications)
  - long-term cryogen storage, 749, 809
  - Polatron GHz receiver, 577
  - space experiments (*see* Space experiments)
  - space instruments (*see* Space instruments)
  - SQUIDS, 793
  - thermal switches (*see* Heat switches)
  - vibration isolation systems, 719, 739
- Iwate Univ., 443
- J-T cryocoolers:
  - APD J-T for cryosurgery, 783
  - Ball 6K J-T for NGST Instruments, 775
  - Ball 6K hybrid J-T/Stirling cooler, 63
  - Ball 10K hybrid J-T/Stirling cooler, 505
  - mixed-gas auto-cascade J-Ts, 523
  - small throttle-cycles with mixed gasses, 513
- Jet Propulsion Lab:
  - cryocooler reliability prediction, 637
  - gamma-ray PT cooler, 155
  - Planck sorption compressor element, 531
  - Planck sorption performance pred. tools, 541
  - TES pulse tube cryocooler, 131
- Johnson & Johnson Co., 189
- Joule-Thomson Cryocoolers (*see* J-T cryocoolers)
- Justus-Liebig Univ., Giessen, 353
- Kennedy Space Center (NASA), 809
- Kogakuin Univ., 443
- Korea Adv. Institute of Science and Tech., 345
- LG Electronics 65K-5W PT, 125
- Life estimation method, 665
- Life test results:
  - BAE tactical coolers, 665
  - Creare SSRB turbo Brayton, 673
  - TRW 3503 pulse tube, 673
- Liquefier:
  - 89K-20W PT for oxygen liquefier, 199

- vapor precooling with PT, 803
- zero-boil-off cryogen storage, 809, 749
- Lockheed Martin Adv. Tech. Center (Palo Alto):
  - 35K LADS Stirling cooler, 317
  - cooler contamination lessons, 649
  - cooler electronic controller, 145
  - gamma-ray PT cooler w/DRS comp., 155
  - miniature PT coolers for space appl., 145
- Lockheed Martin Astronautics (Denver), 189
- Lockheed Martin Commun. and Power, 145
- Los Alamos National Laboratory:
  - optical cooler development, 631
- Magnetic refrigerators:
  - continuous ADR for below 50 mK, 587
  - PT-cooled ADR for below 96 mK, 597
  - regenerator materials for (*see* Regenerators)
  - refrigerant materials for (*see* Refrigerants)
- Massachusetts Inst. of Technology:
  - dissipation by metal bellows, 605
  - G-M cooler with external flow loop, 393
- Materials:
  - properties database, 681
  - conductance of (*see* Conductance)
  - refrigerants (*see* Refrigerants)
  - regenerator (*see* Regenerators)
- Matra Marconi coolers (*see* Astrium coolers)
- MER Corp., 427
- Meisei Univ., 443
- Mesoscopic Devices, 199
- MetroLaser, Inc., 621
- Miniature sorption coolers, 551
- Mission Research Corp., 749
- MITI, Mech. Engin. Lab, 363, 371
- Mixed gasses for refrigerants (*see* Refrigerants)
- Molecular dyes, 621
- MOPITT cooler performance, 759
- Moscow Power Engineering Inst., 513
- Moscow State Univ. (Russia), 457
- Multistage optim. using exergy analysis, 69
- Nat'l Inst. of Standards and Tech. (*see* NIST)
- NGST, coolers for, 775
- Ninon University:
  - 2.4K two-stage PT using  $GdAlO_3$ , 213
  - 80K-1W pulse tube for HTS filters, 119
  - using  $^3He$  for sub-4K PT, 273
- NIST:
  - database of cryo material properties, 681
  - heat conduction through metal spheres, 419
  - NIST/Lockheed miniature flight PT, 189
  - regenerators with heat removal, 409
  - zero-boil-off cryogen storage, 809
  - vapor precooling in PT liquefier, 803
- Nat'l Res. Inst. for Metals (Japan):
  - regenerator materials for sub-4K, 465
  - regenerator prop. of Sb compounds, 443
- Optical cooler developments:
  - Ball Aerospace research, 613
  - LosAlamos/UNM, 631
  - Imperial College London, 621
- Outgassing, temperature dependence of, 659
- Oxford University:
  - high-efficiency compressor, 169
  - vibration reduction in compressors, 175
- Planck sorption coolers, 531, 541
- Polatron, sub-Kelvin coolers for, 577
- Properties, database of cryogenic, 681
- Pulse tube cryocoolers:
  - 2.4K two-stage Daikin using  $GdAlO_3$ , 213
  - 4K two-stage Aisin Seiki, 243
  - 4K Cryomech PT405, 205
  - 4K GM/PT hybrid refrigerator, 265
  - 20K two-stage Karlsruhe, 221
  - 50K-60W single-stage for HTS, 235
  - 65K-5W LGE air-cooled PT, 125
  - 65K-0.3W miniature Lockheed, 145
  - 70K-67W high cooling power, 327
  - 80K-1W with Ricor compressor, 317
  - 80K-1W Daikin for HTS filters, 119
  - 80K-1.5W JPL/LM gamma-ray cooler, 155
  - 89K-20W for oxygen liquefier, 199
  - 95K Raytheon hybrid Stirling/PT, 183
  - GM-type PT devel. at CEA, 229
  - NIST/Lockheed miniature flight, 189
  - TRW 3503, 673
  - TRW 6020, 17
  - TRW 95K high efficiency, 169, 163
  - TRW TES, 131
- Pulse tube theory and investigations:
  - 2.4K achieved using  $GdAlO_3$ , 213
  - 4K 2-stage development, 243
  - 20K 2-stage development, 221
  - 50K-60W development for HTS, 235
  - 70K-67W four-valve development, 327
  - 80K-1W with Ricor compressor, 317
  - combined cooling and freezing cycle, 291
  - dc flow visualization, 371
  - exergy analysis for multi-stage optimization, 69
  - gas dynamics, numerical study of, 363
  - GM-type PT development at CEA, 229
  - He and  $N_2$  mixtures as working fluid, 281
  - heat transfer in PT, numerical study, 345
  - hybrid Stirling /PT expander, 259
  - multi-bypass pulse tube, 337
  - Oxford/Hymatic compressor for PT, 169
  - PT design for GM-type compressor, 249
  - regenerator materials for 20K, 475
  - shuttle loss in pulse tubes, 353
  - sub-4K operation using  $^3He$ , 273
  - thermoacoustic driven pulse tube, 301
  - vapor precooling in PT liquefier, 803
- Queen Mary & Westfield College, 577
- RAL (*see* Rutherford Appleton Laboratory)
- Rare earth compounds (*see* Regenerators)
- Raytheon Corp., Philadelphia, 401

- Raytheon Systems (*formerly Hughes Aircraft*):  
 cooler contamination lessons, 649  
 35K 1.2W PSC Stirling cooler, 35  
 60K 2W PSC Stirling cooler, 45  
 95K high efficiency hybrid Stirling /PT, 183  
 exergy flow for multi-stage optimization, 69  
 two-stage hybrid Stirling /PT expander, 183, 259
- Refrigerants:  
 mixed gases in J-Ts, 513, 523  
 PT with He and  $N_2$  mixed gases, 281  
 $^3He$  for use below 4K, 273
- Regenerators:  
 behavior with intermediate heat removal, 409  
 erbium-based materials for, 433, 475  
 GAP material for sub-4K, 465  
**GdAlO<sub>3</sub>**, in 2.4K PT, 213  
**HoCu<sub>2</sub>**, with  $^3He$  in 1.65K GM, 381  
 heat conduction through metal spheres, 419  
**NdInCu<sub>2</sub>**, with  $^3He$  in 1.64K GM, 381  
 properties of polycrystalline Gd<sub>2</sub>In, 457  
 properties of Sb compounds for 4K, 443  
 parallel microchannel, 427  
 rare earth powders, manufacturing of, 449
- Reliability of cryocoolers:  
 1st-order life estimation method, 665  
 AFLR reliability initiatives, 27  
 AFRL char, and endurance update, 17  
 cooler contamination lessons, 649  
 inspection results on TRW 3503, 673  
 inspection results on Creare SSRB, 673  
 JPL reliability prediction methodology, 637  
 life and reliability of Brayton coolers, 489  
 temperature dependence of outgassing, 659
- Requirements, space cooler overview, 1
- Reverse-Brayton coolers (*see* Turbo Brayton coolers)
- Rutherford Appleton Laboratory:  
 10K 2-stage Astrium Stirling, 55
- Signal USFA high reliability coolers, 111
- Silver-filled epoxy conductance, 689
- Software:  
 Turbo Brayton cooler model, 499
- Sorption cryocoolers:  
 microminiature, 551  
 Planck hydride compressors, 531  
 Planck performance prediction tools, 541  
 Polatron sub-Kelvin, 577  
 sub-Kelvin for space application, 561, 567
- Space experiments:  
 International Space Station, 139  
 NIST/Lockheed Martin miniature PT, 189
- Space instrument missions:  
 FIRST, 567  
 HIRDLS, 769  
 MOPITT, 759  
 NGST, 775  
 Planck, 531, 541, 577  
 TES, 131
- Stanford University, 577
- Starmet, rare earth powders, 449
- Stirling cryocoolers:  
 AIM space cooler program, 139  
 Astrium 10K Stirling cooler, 55  
 BAE Systems tactical life tests, 665  
 Ball 1.5W-55K HIRDLS, 769  
 Ball 6K hybrid J-T/Stirling cooler, 63  
 Ball 10K hybrid J-T/Stirling cooler, 505  
 DRS linear tactical coolers, 11, 103  
 DRS 1.75 W 77K cooler, 155  
 exergy analysis for multi-stage optimization, 69  
 linear for tactical weapon systems, 11  
 MMS/Astrum 50-80K MOPITT, 759  
 Raytheon 35K 1.2W PSC, 35  
 Raytheon 60K 2W PSC, 45  
 Raytheon hybrid with PT expander, 183, 259  
 reliability prediction methodology, 637  
 Signal-USFA high reliability, 111  
 STI improvements for HTS, 87  
 Sumitomo 70K-6W for HTS, 95  
 Sunpower M87 with 7.5W at 77K, 79  
 temperature dependence of outgassing, 659
- Storage, long-term of cryogenics, 749, 809
- Sub-Kelvin coolers:  
 continuous ADR, 587  
 dissipation in bellows for, 605  
 pulse tube precooled ADR, 597  
 sorption coolers for space, 561, 567
- Sumitomo Heavy Industries:  
 70K-6W Stirling for HTS appl., 95  
 GM cooler below 2K, 381
- Sunpower, Inc. cryocoolers, 79
- Superconductor applications (*see* HTS applications)
