

Contents

Government Cryocooler Development Programs	1
NASA Space Cryocooler Programs—An Overview	1
<i>R.G. Ross, Jr., Jet Propulsion Lab, Pasadena, CA; and R.F. Boyle, NASA GSFC, Greenbelt, MD</i>	
Air Force Research Laboratory Space Cryogenic Technology Research Initiatives	9
<i>B.J. Tomlinson, B. Flake, and T. Roberts, Air Force Research Laboratory, Kirtland AFB, NM</i>	
Status Report on the Linear Drive Coolers for the Department of Defense Standard Advanced Dewar Assembly (SADA)	17
<i>W.E. Salazar, US Army Night Vision, Fort Belvoir, VA</i>	
Space Stirling Cryocooler Developments	27
Development of a Low-Power Stirling Cycle Cryocooler for Space Applications	27
<i>J.S. Reed and G.D. Peskett, Univ. of Oxford, Oxford, UK</i>	
High Capacity Flexure Bearing Stirling Cryocooler On-Board the ISS	31
<i>T. Trollier, A. Ravex, and P. Crespi, Air Liquide DTA, Sassenage, France; J. Mullié, P. Bruins, and T. Benschop, Thales Cryogenics, Eindhoven, The Netherlands</i>	
Space Flight Qualification Program for the AMS-02 Commercial Cryocoolers	37
<i>K.A. Shirey, I.S. Banks, S.R. Breon, and R.F. Boyle, NASA/Goddard Space Flight Center, Greenbelt, MD</i>	
Thermodynamic Performance of the Ball Aerospace Multistage Stirling Cycle Mechanical Cooler	45
<i>W.J. Gully, D. Glaister, E. Marquardt, R. Stack, and G.P. Wright, Ball Aerospace, Boulder, CO</i>	
Performance Characterization of the Ball Aerospace 35/60K Protoflight Spacecraft Cryocooler	51
<i>C.H.Y. Bruninghaus and B.J. Tomlinson, AFRL, Kirtland AFB, NM; and N. Abhyankar, Dynacs Engineering, Albuquerque, NM</i>	
Continued Characterization Results for the Astrium 10K Developmental Cryocooler	59
<i>S.A. Yarbrough, B.A. Flake, and B.J. Tomlinson, AFRL, Kirtland AFB, NM; and N. Abhyankar, Dynacs Engineering, Albuquerque, NM</i>	

Tactical and Commercial Stirling Cryocoolers	69
Technology Development Related to Tactical Cryocoolers at Raytheon Infrared Operations	69
<i>B.A. Ross, M.L. Brest, and F.I. Mirbod, Raytheon Infrared Operations, Goleta, CA</i>	
Performance and Reliability Data for a Production Free Piston Stirling Cryocooler	75
<i>M. Hanes and A. O'baid, Superconductor Technologies, Inc., Santa Barbara, CA</i>	
CMCEC Life Test Results and Related Issues	79
<i>S.W.K. Yuan, D.T. Kuo, and T.D. Lody, CMCElectronics, Sylmar, CA</i>	
MTTF Prediction in Design Phase on Thales Cryogenics Integral Coolers	87
<i>J.M. Cauquil, J.Y. Martin, Thales Cryogenics, Blagnac, France; and P. Bruins, T. Benschop, Thales Cryogenics, Eindhoven, The Netherlands</i>	
An Experimental Study of the Phase Shift between Piston and Displacer in a Stirling Cryocooler	95
<i>S.J. Park, Y.J. Hong, H.B. Kim, D.Y. Koh, Korea Inst. of Mach. & Mat'ls, Taejeon, Korea; B.K. Yu, Wooyoung, Seoul, Korea; and K.B. Lee, Pusan Nat'l Univ., Pusan, Korea</i>	
Dynamic Analysis of a Free Piston Stirling Refrigerator	103
<i>Y-J Hong, S-J Park, H-B Kim, D-Y Koh, Korea Inst. of Mach. and Materials, Taejeon, Korea</i>	
 Tactical and Commercial Pulse Tube Cryocoolers	 109
Low Vibration 80 K Pulse Tube Cooler with Flexure Bearing Compressor ...	109
<i>P.C. Bruins, A. de Koning, and T. Hofman, Thales Cryogenics, Eindhoven, The Netherlands</i>	
Development of 40-80K Linear-Compressor Driven Pulse Tube Cryocoolers	115
<i>J. Liang, J.H. Cai, Y. Zhou, W.X. Zhu, L.W. Yan, W. Jing, Y.L. Ju, Y.K. Hou, and K. Yuan, Chinese Academy of Sciences, Beijing, China</i>	
Performance and System Design of 60K Pulse Tube Coolers Driven by a Linear Compressor for HTS Filter Subsystems	123
<i>Y.L. Ju, K. Yuan, Y.K. Hou, W. Jing, J.T. Liang, and Y. Zhou, Chinese Acad. of Sciences, Beijing, China</i>	
High Capacity Pulse Tube Cryocooler	131
<i>I. Charles, J.M. Duval, and L. Duband, CEA/SBT, Grenoble, France; T. Trollier and A. Ravex, Air Liquide DTA, Sassenage, France; and J. Y. Martin, Thales Cryogenics, Blagnac, France</i>	
Development of Single and Two-Stage Pulse Tube Cryocoolers with Commercial Linear Compressors	139
<i>K.B. Wilson, Sunpower, Inc., Athens, Ohio; and D.R. Gedeon, Gedeon Assoc., Athens, Ohio</i>	
Development of a 5 W at 80 K Stirling-Type Pulse Tube Cryocooler	149
<i>L.W. Yang, G. Thummes, Univ. of Giessen, Giessen, Germany; N. Rolff, H.U. Häfner, Leybold Vacuum, Cologne, Germany</i>	

Design and Test of a 70 K Pulse Tube Cryocooler	157
<i>Y. Yasukawa, K. Ohshima, K. Toyama, T. Itoyama, Y. Tsukahara, R. Kikuchi, and N. Matsumoto, Fuji Electric Corp. R&D; and T. Kamoshita and T. Takeuchi, Fuji Electric Co., Tokyo, Japan</i>	
Space Pulse Tube Cryocooler Developments	165
Miniature 50 to 80 K Pulse Tube Cooler for Space Applications	165
<i>T. Trollier and A. Ravex, Air Liquide DTA, Sassenage, France; I. Charles and L. Duband, CEA/SBT, Grenoble, France; J. Mullié, P. Bruins, and T. Benschop, Thales Cryogenics, Eindhoven, The Netherlands; M. Linder, ESA/ESTEC, Noordwijk, The Netherlands</i>	
Design and Characterization of a Miniature Pulse Tube Cooler	173
<i>A.S. Gibson, R. Hunt, Astrium UK, Stevenage, UK; I. Charles, L. Duband, CEA/SBT, Grenoble, France; M. Crook, A.H. Orłowska, T.W. Bradshaw, RAL, Chilton, UK; and M. Linder, ESA/ESTEC, Noordwijk, The Netherlands</i>	
Low Cost, Lightweight Space Cryocoolers	183
<i>C.S. Kirkconnell, G.R. Pruitt, K.D. Price, Raytheon ES, El Segundo, CA; and B.A. Ross and W.R. Derossett, Raytheon IS, Santa Barbara, CA</i>	
JAMI Flight Pulse Tube Cooler System	191
<i>J. Raab, R. Colbert, J. Godden, D. Harvey, R. Orsini, G. Toma; TRW, Redondo Beach, CA</i>	
Performance Testing of a Lightweight, High Efficiency Cooler	199
<i>L. J. Salerno, P. Kittel, NASA/ARC, Moffett Field, CA; and B.P.M. Helvensteijn, A. Kashani, Atlas Scientific, San Jose, CA</i>	
Development of a Lightweight Pulse Tube Cryocooler for Space Applications	205
<i>T. Nast, J. Olson, P. Champagne, B. Evtimov, Lockheed Martin ATC, Palo Alto, CA.; T. Renna, Lockheed Martin CSC, Newtown, PA; and G. Sarri and C. Hernandez, ESA/ESTEC, Noordwijk, The Netherlands</i>	
Development of a Two-Stage Pulse Tube Cryocooler for 35 K Cooling	213
<i>T.C. Nast, J. Olson, B. Evtimov, and V. Kotsubo, Lockheed Martin ATC, Palo Alto, CA</i>	
High Capacity Two-Stage Pulse Tube Cooler	219
<i>C.K. Chan, T.Nguyen, and C. Jaco, TRW, Redondo Beach, CA; B.J. Tomlinson and T. Davis, AFRL, Kirtland AFB, NM</i>	
Development of a High Capacity Two-Stage Pulse Tube Cryocooler	225
<i>W.G. Foster, J. Olson, P. Champagne, B. Evtimov, E. Will, A. Collaco, and T. Nast, Lockheed Martin ATC, Palo Alto, CA; R. Clappier, Clappier Consulting, Discovery Bay, CA; A. Mitchell and D. Jungman, Northrup Grumman, Baltimore, MD; R. Radebaugh, NIST, Boulder, CO; and D.G.T. Curran, Aerospace Corp., El Segundo, CA</i>	
Two Stage Hybrid Cryocooler Development	233
<i>K.D. Price and C.S. Kirkconnell, Raytheon ES, El Segundo, CA</i>	
Development of a 10 K Pulse Tube Cryocooler for Space Applications	241
<i>J. Olson, T.C. Nast, B. Evtimov, and E. Roth, Lockheed Martin ATC, Palo Alto, CA</i>	
Linear Compressor Development and Modeling	247
Scaling of Cryocooler Compressors	247
<i>P.B. Bailey and M.W. Dadd, Oxford Univ., Oxford, UK; C.F. Cheuk and N.G. Hill, Hymatic Engineering, Redditch, UK; and J. Raab, TRW, Redondo Beach, CA</i>	

The Linearity of Clearance Seal Suspension Systems	255
<i>M.W. Dadd, P.B. Bailey, and G. Davey, Oxford Univ., Oxford, UK; T. Davis, B.J. Thomlinson, AFRL, Albuquerque, NM</i>	
Piston Resonance in the Orifice Pulse Tube	265
<i>P.C.T. de Boer, J.-M. Duval, I. Charles, and L. Duband, CEA-Grenoble, France</i>	
Producibility of Cryocooler Compressors	275
<i>C.F. Cheuk, N.G. Hill, R Strauch, Hymatic Engineering, Redditch, UK; P.B. Bailey, Oxford Univ., Oxford, UK; J. Raab, TRW, Redondo Beach, CA</i>	
GM-Type Pulse Tube Coolers for Low Temperatures	283
Helium-3 Pulse Tube Cryocooler	283
<i>I.A. Tanaeva and A.T.A.M. De Waele, Eindhoven Univ. of Tech., The Netherlands</i>	
Two-Stage Pulse Tube Cryocoolers for 4 K and 10 K Operation	293
<i>C. Wang and P.E. Gifford, Cryomech, Syracuse, NY</i>	
Development of a 4K Two-Stage Pulse Tube Cryocooler	301
<i>M.Y. Xu, P.D. Yan, T. Koyama, T. Ogura, R. Li, Sumitomo Heavy Industries, Tokyo, Japan</i>	
Performance of a 4K Pulse Tube Refrigerator and Its Improvement	309
<i>S.W. Zhu, M. Nogawa, S. Katsuragawa, M. Ichikawa, T. Inoue, Aisin Seiki Co., Aichi, Japan</i>	
Experimental Investigation of a G-M Type Coaxial Pulse Tube Cryocooler	317
<i>K. Yuan, J.T. Liang, Y.L. Ju, Chinese Academy of Sciences, Beijing, P.R. China</i>	
Hybrid Cryocoolers Using Pulse Tubes	325
Experimental Study on Two-Stage Pulse Tube Refrigeration with Mixtures of Helium and Hydrogen	325
<i>N. Jiang, Z.H. Gan, G.B. Chen, L.M. Qiu, Y.L. Jiang, Y.L. He, and N. Li, Zhejiang University, Hangzhou, China</i>	
Experimental Investigation of 4K VM Type Pulse Tube Cooler	331
<i>W. Dai, Y. Matsubara, and H. Kobayashi, Nihon Univ., Funabashi, Japan</i>	
Affecting the Gross Cooling Power of a Pulse Tube Cryocooler with Mass Flow Control	337
<i>A. Waldauf, M. Thürk, and P. Seidel, FSU, Jena, Germany; and T. Schmauder, Leybold Optics, Hanau, Germany</i>	
Pressure Wave Generator for a Pulse Tube Cryocooler	343
<i>Y. Matsubara, W. Dai, Nihon Univ., Funabashi, Japan; and H. Sugita and S. Tooyama, NASDA, Tsukuba, Japan</i>	
A First Order Model of a Hybrid Pulse Tube/Reverse-Brayton Cryocooler	349
<i>G.F. Nellis, J.H. Baik, and J.M. Pfothenhauer, Univ. of Wisconsin, Madison, WI; and J.R. Maddocks and A. Kashani, Atlas Scientific, San Jose, CA</i>	

Pulse Tube Analyses and Experimental Measurements	361
The Role of the Orifice and the Secondary Bypass in a Miniature Pulse Tube Cryocooler	361
<i>Y.K. Hou, Y.L. Ju, W. Jing, and J.T. Liang, Chinese Acad. of Sciences, Beijing, China</i>	
Surface Heat Pumping Loss in a Pulse Tube Refrigerator	371
<i>J. Jung and S. Jeong, Adv. Institute of Science and Tech., Taejon, Korea</i>	
Numerical Model for Pulse Tubes using Method of Lines	379
<i>A. Schroth and M. Sahimi, USC, Los Angeles, CA; and C. Kirkconnell, Raytheon ES, El Segundo, CA</i>	
Pulse Tube Refrigerator Analysis, Including Inertance Tube and Friction in the Regenerator	389
<i>L. Fang, X. Deng, and L. Bauwens, Univ. of Calgary, Calgary, Canada</i>	
GM Refrigerator Developments	397
Cooling Performance of a Small GM Cryocooler with a New Ceramic Magnetic Regenerator Material	397
<i>T. Satoh, Sumitomo Heavy Industries, Ltd., Yokosuka, Japan; and T. Numazawa, Tsukuba Magnet Lab., Nat'l Inst. for Materials Science, Tsukuba, Japan</i>	
Improvement of 4K GM Cooling Performance with a New Regenerator Material	403
<i>Y. Ikeya and R. Li, Sumitomo Heavy Industries, Tokyo, Japan; and T. Numazawa, Tsukuba Magnet Lab/NIMS, Tsukuba, Japan</i>	
Thermal Hysteresis at 4 K with a GM Cryocooler	411
<i>G.E. Bonney, Advanced Research Systems, Inc., Allentown, PA</i>	
Thermoacoustic Refrigerator Investigations	421
Study on the Onset Temperature Gradient of Regenerators Used for Thermoacoustic Prime Movers	421
<i>H. Ling, E. Luo, J. Wu, M. Yang, X. Li, Chinese Academy of Sciences, Beijing, China</i>	
Study on Thermoacoustic DC-Flow Model for a Cyclic Regenerator due to Nonlinear Effects	425
<i>E. Luo, Chinese Academy of Sciences, Beijing, China</i>	
Thermodynamic Analysis of a Traveling Wave Thermoacoustic Device by Use of a Distributed-Parameter Method	431
<i>M. Yang, X. Li, and G. Chen, Zhejiang Univ., Hangzhou, China; and E. Luo, H. Ling, and J. Wu, Chinese Academy of Sciences, Beijing, China</i>	
Investigation of a High Frequency Travelling Wave Thermoacoustic-Driven System	439
<i>Q. Li and Z. Yu, CAS, Beijing, China; and J. Wu, F. Guo, and Q. Tu, Huazhong Univ. of Science and Tech., Wuhan, China</i>	
The Influence of Thermal Natural Convection on a Traveling-Wave Thermoacoustic Engine	447
<i>H. Liu, E. Luo, H. Ling, and J. Wu, Chinese Academy of Sciences, Beijing, China</i>	

Experimental Investigation of Thermoacoustically Driven Pulse Tube Refrigerator Using Noble Gas Mixtures	451
<i>G.B. Chen, K. Tang, T. Jin, Y. Shen, and Y.H. Huang, Zhejiang Univ., Hangzhou, China</i>	
Regenerator Materials Development	457
Low Temperature Cryocooler Regenerator Materials	457
<i>K.A. Gschneidner, Jr., A.O. Pecharsky, and V.K. Pecharsky, Ames Lab, Iowa State Univ., Ames, Iowa</i>	
Specific Heat and Magnetic Properties of GdSb	467
<i>H. Nakane, S. Yamazaki, T. Yamaguchi, S. Yoshizawa, and T. Numazawa, Kogakuin Univ. and Meisei Univ., Tokyo, Japan</i>	
A New Ceramic Magnetic Regenerator Material for 4 K Cryocoolers	473
<i>T. Numazawa, Tsukuba Magnet Lab, Tsukuba, Japan; T. Yanagitani and H. Nozawa, Konoshima Chemical Co, Kagawa, Japan; and Y. Ikeya, R. Li, and T. Satoh, Sumitomo Heavy Industries, Tokyo, Japan</i>	
Predicted Performance of a Low-Temperature Perforated Plate Regenerator	483
<i>J.B. Hendricks, Alabama Cryogenic Engineering, Huntsville, Alabama</i>	
LIGA-Fabricated High-Performance Micro-Channel Regenerators for Cryocoolers	489
<i>K. Kelly, A. McCandless, and S. Motakef, Mezzo Systems, Baton Rouge, LA</i>	
Improved Flow Patterns in Etched Foil Regenerator	499
<i>M.P. Mitchell, Mitchell/Stirling, Berkeley, CA; and D. Fabris, Santa Clara Univ., Santa Clara, CA</i>	
Compact High Effectiveness Parallel Plate Heat Exchangers	507
<i>E.D. Marquardt, Ball Aerospace, Boulder, CO; and R. Radebaugh, NIST, Boulder, CO</i>	
Regenerator Performance Analyses and Tests	517
Measurement of Heat Conduction through Bonded Regenerator Matrix Materials	517
<i>M.A. Lewis and R. Radebaugh, National Institute of Standards and Technology, Boulder, CO</i>	
Regenerator Loss Measurements at Low Temperatures and High Frequencies	523
<i>J.M. Pfothenauer, Univ. of Wisconsin, Madison, WI; and P.E. Bradley, M.A. Lewis, R. Radebaugh, NIST, Boulder, CO</i>	
Regenerator Characterization under Oscillating Flow and Pulsating Pressure	531
<i>S. Jeong, K. Nam, and J. Jung, Korea Adv. Inst. of Science and Tech., Daejeon, Korea</i>	
Oscillating Flow Characteristics of a Regenerator under Low Temperature Conditions	539
<i>K. Yuan, L. Wang, Y.K. Hou, Y. Zhou, J.T. Liang, Y.L. Ju, Chinese Academy of Sciences, Beijing, P.R. China</i>	

A Comparative Evaluation of Numerical Models for Cryocooler Regenerators	547
<i>J.P. Harvey and P.V. Desai, Georgia Inst. of Tech., Atlanta, GA; and C.S. Kirkconnell, Raytheon ES, El Segundo, CA</i>	
Periodic Porous Media Flows in Regenerators	555
<i>T. Roberts, AFRL, Kirtland AFB, NM; and P. Desai, Georgia Inst. of Tech., Atlanta, GA</i>	
Turbo-Brayton Cryocooler Developments	563
Initial Operation of the NICMOS Cryocooler on the Hubble Space Telescope	563
<i>W.L. Swift, J.A. McCormick, J.J. Breedlove, F.X. Dolan, and H. Sixsmith, Creare, Hanover, NH</i>	
Development of a Turbo-Brayton Cooler for 6 K Space Applications	571
<i>M.V. Zagarola, W.L. Swift, H. Sixsmith, J.A. McCormick, M.G. Izenson, Creare, Hanover, NH</i>	
J-T and Throttle-Cycle Cryocooler Developments	579
A Hybrid, Multistage 10K Cryocooler for Space Applications	579
<i>R. Levenduski, J. Lester, Redstone Engineering, Carbondale, Colorado; and E. Marquardt, Ball Aerospace, Boulder, CO</i>	
Development of a Medium-Scale Collins-Type 10 K Cryocooler	587
<i>C.L. Hannon and J. Gerstmann, Advanced Mechanical Technology, Inc., Watertown, MA; and M. Traum, J.G. Brisson, and J.L. Smith Jr., MIT, Cambridge, MA</i>	
Efficiency of the ARC and Mixed Gas Joule Thomson Refrigerators	595
<i>A. Alexeev, Messer Cryotherm, Kirchen, Germany; and D. Goloubev, E. Mantwill, TU Dresden, Dresden, Germany</i>	
Further Development of the Mixture Refrigeration Cycle with a Dephlegmation Separator	603
<i>M.Q. Gong, J.F. Wu, E.C. Luo, Y.F. Qi, Q.G. Hu, and Y. Zhou; Chinese Academy of Sciences, Beijing, China</i>	
Research on Adiabatic Capillary Tube Expansion Devices in Mixed-Refrigerant J-T Cryocoolers	609
<i>Y.F. Qi, M.Q. Gong, E.C. Luo, J.F. Wu, and Y. Zhou; Chinese Academy of Sciences, Beijing, China; and Y. Cao, Zhejiang Univ., Hangzhou, China</i>	
Study of a Vortex Tube by Analogy with a Heat Exchanger	615
<i>Y. Cao, G.M. Chen, Zhejiang Univ., Hangzhou, China; Y.F. Qi, E.C. Luo, J.F. Wu, M.Q. Gong, Chinese Academy of Sciences, Beijing, China</i>	
Thermodynamic Prediction of the Vortex Tube Applied to a Mixed-Refrigerant Auto-Cascade J-T Cycle	621
<i>Y. Cao, G.M. Chen, Zhejiang Univ., Hangzhou, China; M.Q. Gong, Y.F. Qi, E.C. Luo, J.F. Wu, Chinese Academy of Sciences, Beijing, China</i>	

Sorption Cryocooler Developments	627
Evaluation of Hydride Compressor Elements for the Planck Sorption Cryocooler	627
<i>R.C. Bowman, Jr., M. Prina, D.S. Barber, P. Bhandari, A.S. Loc, and M.E. Schmelzel, JPL, Pasadena, CA; D. Crumb and J.W. Reiter, Swales Aerospace, Pasadena, CA; and G. Morgante, IASF/CNR, Bologna, Italy</i>	
Initial Test Performance of a Closed-Cycle Continuous Hydrogen Sorption Cooler, the Planck Sorption Breadboard Cooler	637
<i>M. Prina, A. Loc, M.E. Schmelzel, D. Pearson, J. Borders, R.C. Bowman, A. Sirbi, P. Bhandari, L.A. Wade, A. Nash, JPL, Pasadena, CA; and G. Morgante, CNR-IASF, Bologna, Italy</i>	
Construction and Operation of a 165 K Microcooler with a Sorption Compressor and a Micromachined Cold Stage	643
<i>J.F. Burger, H.J. Holland, H.J.M. ter Brake, M. Elwenspoek, and H. Rogalla, Univ. of Twente, The Netherlands</i>	
Sub-Kelvin and Optical Refrigerator Developments	651
Automated Closed-Cycle Cooling to 250 mK for the Polatron	651
<i>R.S. Bhatia, V.V. Hristov, B.G. Keating, A.E. Lange, P.V. Mason, B.J. Philhour, G. Sirbi, and K.W. Yoon, Caltech, Pasadena, CA; and S.T. Chase, Chase Research, Sheffield, UK</i>	
Progress in the Development of a Continuous Adiabatic Demagnetization Refrigerator	661
<i>P.J. Shirron, E.R. Canavan, M.J. DiPirro, J. Francis, M. Jackson, T.T. King, and J.G. Tuttle, NASA/Goddard Space Flight Center, Greenbelt, MD</i>	
Sub-Kelvin Mechanical Coolers	669
<i>A. Ravex and P. Hernandez, Air Liquide DTA, Sassenage, France; and L. Duband, CEA/SBT, Grenoble, France</i>	
Preliminary Performance of a Superfluid ^3He-^4He Compressor	675
<i>F.K. Miller and J.G. Brisson, Massachusetts Institute of Technology, Cambridge, MA</i>	
Preliminary Experimental Results Using a Three-Stage Superfluid Stirling Refrigerator	681
<i>C. Phillips and J.G. Brisson, Massachusetts Institute of Technology, Cambridge, MA</i>	
Dielectric Mirror Leakage and Its Effects on Optical Cryocooling	687
<i>G. Mills, J. Fleming, Z. Wei, Ball Aerospace, Boulder, CO; and J. Turner-Valle, Optical Engineering Assoc., Longmont, CO</i>	
Cryocooler Integration Technologies	693
Advanced Components for Cryogenic Integration	693
<i>D. Bugby, B. Marland, C. Stouffer, and E. Krolczek, Swales Aerospace, Beltsville, MD</i>	
Cryogenic Loop Heat Pipes as Flexible Thermal Links for Cryocoolers	709
<i>D. Khrustalev, Thermacore International, Lancaster, PA</i>	

A Thermally Conductive and Vibration Protective Interface for Linear Cryogenic Coolers in Applications for Gimbaled Infrared Devices 717
A.M. Veprik, V.I. Babitsky, Loughborough Univ., Loughborough, UK; and S.V. Riabzev, N. Pundak, Ricor, Ltd., Israel

Space Cryocooler Applications 727

Cryocooler Load Increase due to External Contamination of Low-ε Cryogenic Surfaces 727
R.G. Ross, Jr., Jet Propulsion Lab, Pasadena, CA

Performance Characteristics of the ASTER Cryocooler in Orbit 737
M. Kawada, NIAIST, Tsukuba, Japan; H. Akao, M. Kobayashi, S. Akagi, Mitsubishi Electric, Kamakura, Japan; T. Maekawa, O. Nishihara, Fujitsu, Ltd., Kawasaki, Japan; M. Kudoh, JROSO, Tokyo, Japan; and H. Fujisada, Sensor Information Lab, Tsukuba, Japan

AIRS Pulse Tube Cooler System-Level and In-Space Performance Comparison 747
R.G. Ross, Jr., Jet Propulsion Lab, Pasadena, CA

Final Qualification and Early On-Orbit Performance of the RHESSEI Cryocooler 755
R. Boyle, S. Banks, and K. Shirey, NASA/Goddard Space Flight Center, Greenbelt, MD

Operation of a Sunpower M87 Cryocooler in a Magnetic Field 761
S.R. Breon, K.A. Shirey, I.S. Banks, B.A. Warner, R.F. Boyle and S. Mustafi, NASA/Goddard Space Flight Center, Greenbelt, MD

Active Vibration Cancellation in Astrium Stirling Cycle and Pulse Tube Coolers 771
S. Akhtar and R. Hunt, Astrium, Stevenage, UK

On-Orbit Cooling Performance of a Miniature Pulse Tube Flight Cryocooler 777
D.R. Ladner, Lockheed Martin Astronautics Operations, Denver, CO; R. Radebaugh, P.E. Bradley, M. Lewis, NIST, Boulder, CO; P. Kittel, NASA/ARC, Moffett Field, CA; and J. H. Xiao, Ethicon, Somerville, NJ

Commercial Cryocooler Applications 789

High-Tc Squid-Based Gradiometer Cooled by a Cryotiger Gas-Mixture Cooler 789
A.P. Rijpma, H.J.M. ter Brake, H.J. Holland, and H. Rogalla, Univ. of Twente, The Netherlands

On the Development of a Non-Metallic and Non-Magnetic Miniature Pulse Tube Cooler 799
H.Z. Dang, Y.L. Ju, J.T. Liang, and Y. Zhou, Chinese Academy of Sciences, Beijing, China

Cryogenic Refrigerator Evaluation for Medical and Rotating Machine Applications 805
R.A. Ackermann, General Electric R&D, Niskayuna, NY; D.A. Grey, GE Medical Systems, Florence, SC; and S. Funayama and K. Ito, Sumitomo Heavy Industries, Tokyo, Japan

Helium Free Magnets and Research Systems 813
J. Good, S. Hodgson, R. Mitchell, and R. Hall, Cryogenic, Ltd., London, UK
